

AI-Powered Digital Pathology

Marc Verkooijen,
Clinical Account Executive, Central Europe

Visiopharm is a world-leader in AI-driven precision pathology software

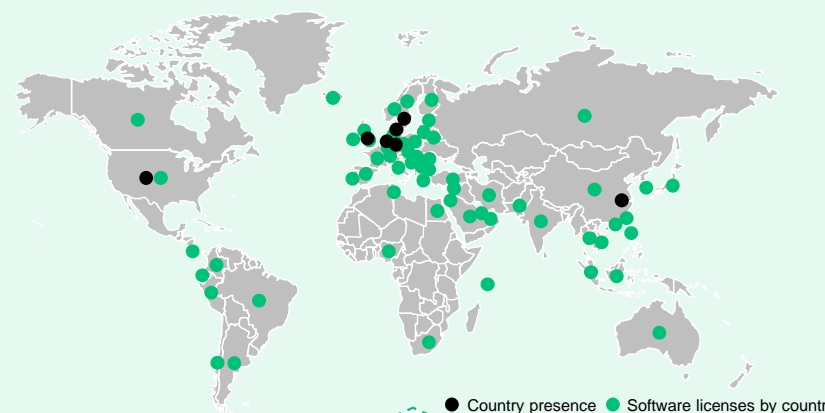

Visiopharm at a glance

- Visiopharm is an established market leader worldwide, supporting scientists and pathologists across biopharma, academia, and diagnostic pathology labs in more than 40 countries
- Visiopharm is delivering industry-leading, AI-driven precision pathology solutions across the research-diagnostic continuum based on a scalable technology platform, which is infinitely configurable for scientists and locked and regulated for diagnostic pathologists - enabling translation between research and diagnostics through deep regulatory expertise

Key highlights

+100 Employees	+20 Years of operations	7 Countries present in globally
19/20 Top big pharma companies served	15m 2020/21A revenue (EUR)	+100% 2020/21A-2025/26F ARR bookings CAGR

Strong geographical reach and customer traction

Global presence²

~900 software licenses sold worldwide in more than 40 countries

Highly diversified customer base with ~25% of software revenue generated by top 10 customers in 2020/21A

Empowered by People, Science, AI and Partners

Team

AI-powered pathology solutions for today, empowering pathologists for tomorrow

Data & Tissue Quality

Quality first mindset throughout the entire tissue diagnostics ecosystem

Productive Workflows

We put the puzzle together; enabling automation rather than human time throughout the digital pathology workflow

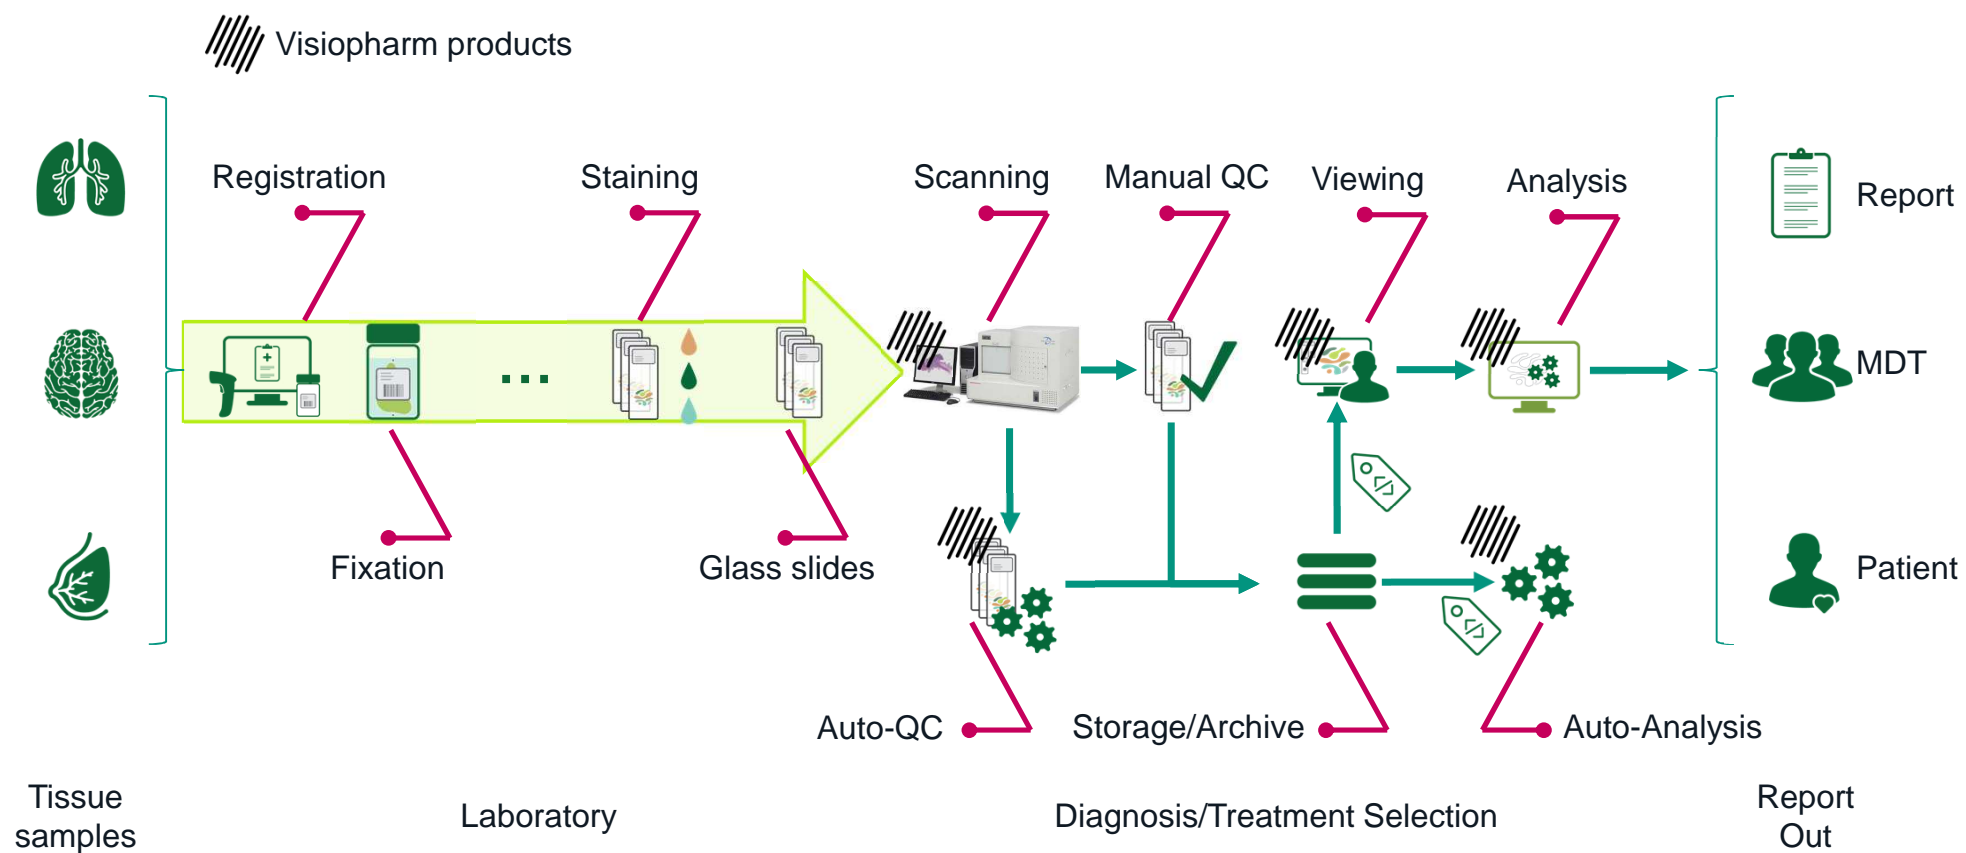

Open & Configurable

Vendor agnostic, 50+ formats, powerful analysis solutions that are highly flexible & configurable

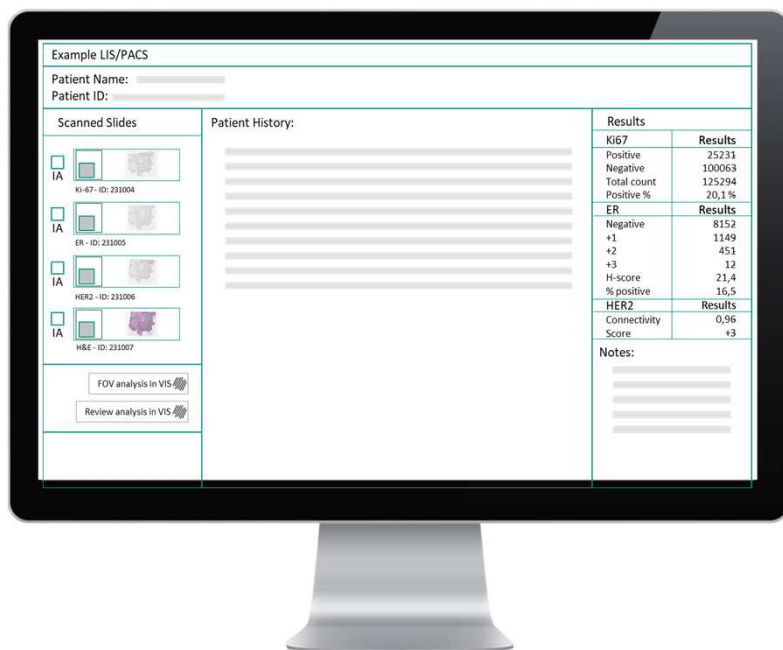

Secure, Scalable

Our solutions deploy and scale across local, distributed or cloud-enabled environments; empowering labs of all sizes to have access to digital pathology solutions

Diagnostische APPs

AI Image Analysis for Diagnostics

*In EU: CE-IVD, in US and others: For research use only, not for use in diagnostics procedures

Ki67 Breast automated image analysis

CONTROL TISSUE DETECTION

✓ Automatically
identify tissue

IDENTIFY INVASIVE TUMOR

✓ Detect invasive
vs. non-
invasive tumor

Ki67 NUCLEAR QUANTIFICATION

✓ Analyze cells
in invasive
areas

REVIEW RESULTS

✓ Intuitive visuals
✓ Reproducible results

Name	Value
Negative Nuclei	449,148
Positive Nuclei	73,837
Proliferation Index	14.12%
Total Nuclei	522,985
Hot Spot Proliferation Index	87.36%

ER/PR Breast automated image analysis

CONTROL TISSUE DETECTION

IDENTIFY INVASIVE TUMOR

ER/PR NUCLEAR QUANTIFICATION

REVIEW RESULTS

Name	Value
Negative Nuclei	5,370
Positive Nuclei	14,224
Total Nuclei	19,594
Positive Percentage	72.59%
H-score [0-300]*	135.37
Allred Score [0-8]	7

✓ Automatically
identify tissue

✓ Detect invasive
vs. non-
invasive tumor

✓ Analyze cells
in invasive
areas

✓ Intuitive visuals
✓ Reproducible results

* Allred & Immunoreactive Score (IRS) can also be reported

HER Breast automated image analysis

CONTROL TISSUE
DETECTION

IDENTIFY TUMOR

HER2 MEMBRANE
QUANTIFICATION

REVIEW RESULTS

Name	Value
Connectivity	0,780
HER2 Score	3

✓ Optionally automatic
tissue detection

✓ Detect tumor
Or manually
outline

✓ Analyze
membrane in
tumor area

✓ Intuitive visuals
✓ Reproducible results

Metastasis Detection automated image analysis

CONTROL TISSUE
DETECTION

IDENTIFY METASTASIS
DETECTION

SORTING HIGHEST
PROBABILITY OF
METASTASIS

REVIEW RESULTS

Name	Value
Largest Metastasis Diameter	1,55 mm
Largest Metastasis Diameter	1.08 mm

✓ Automatically
identify tissue

✓ Detect
Metastasis

✓ Analyze
metastasis
area

✓ Intuitive visuals
✓ Reproducible results

VISIOPHARM®

QUALITOPIX™

AI-driven stain consistency standardization of IHC

Stain quality remains a challenges throughout the pathology workflow

Results of stain quality challenges in conventional workflows

Lack of sufficient standardization of IHC results in significant increases in healthcare cost²

1: Vyberg, M. & Nielsen, S. Proficiency testing in immunohistochemistry—experiences from Nordic Immunohistochemical Quality Control (NordiQC) 2016.

2: Vyberg M, Nielsen S, Røge R, Sheppard B, Ranger-Moore J, Walk E, Gartemann J, Rohr UP, Teichgräber V. Immunohistochemical expression of HER2 in breast cancer: socioeconomic impact of inaccurate tests. 2015.

External quality assessment is essential in pathology

Quality drift and fluctuations between runs are not detected

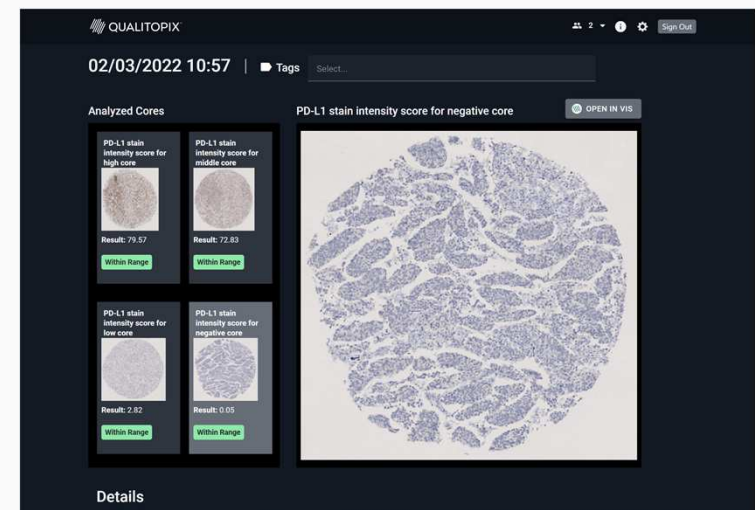

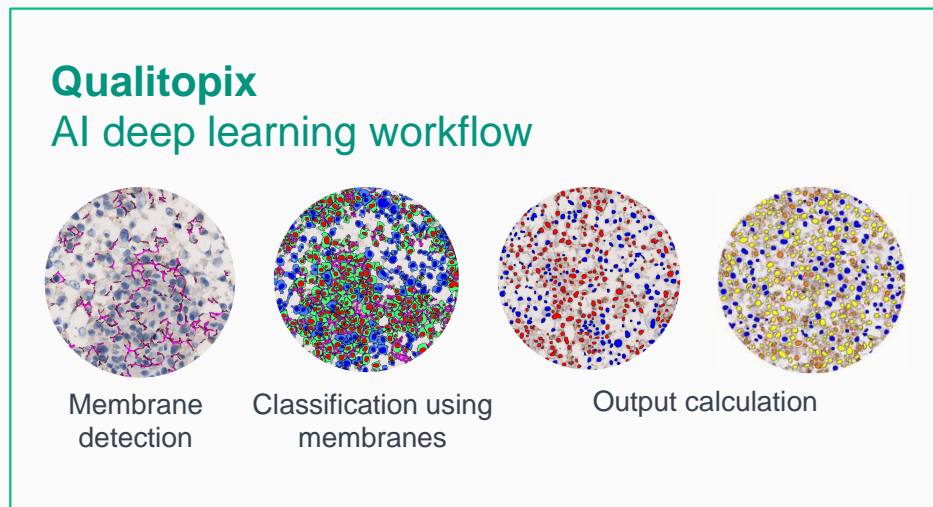

Reference: Data on file from UK-NEQAS.

Qualitopix is een doelgerichte oplossing
die uw kleurings consistentie kan meten,
bewaken en documenteren d.m.v. AI-
gestuurde standaardisatie van uw weefsel
biomarkers

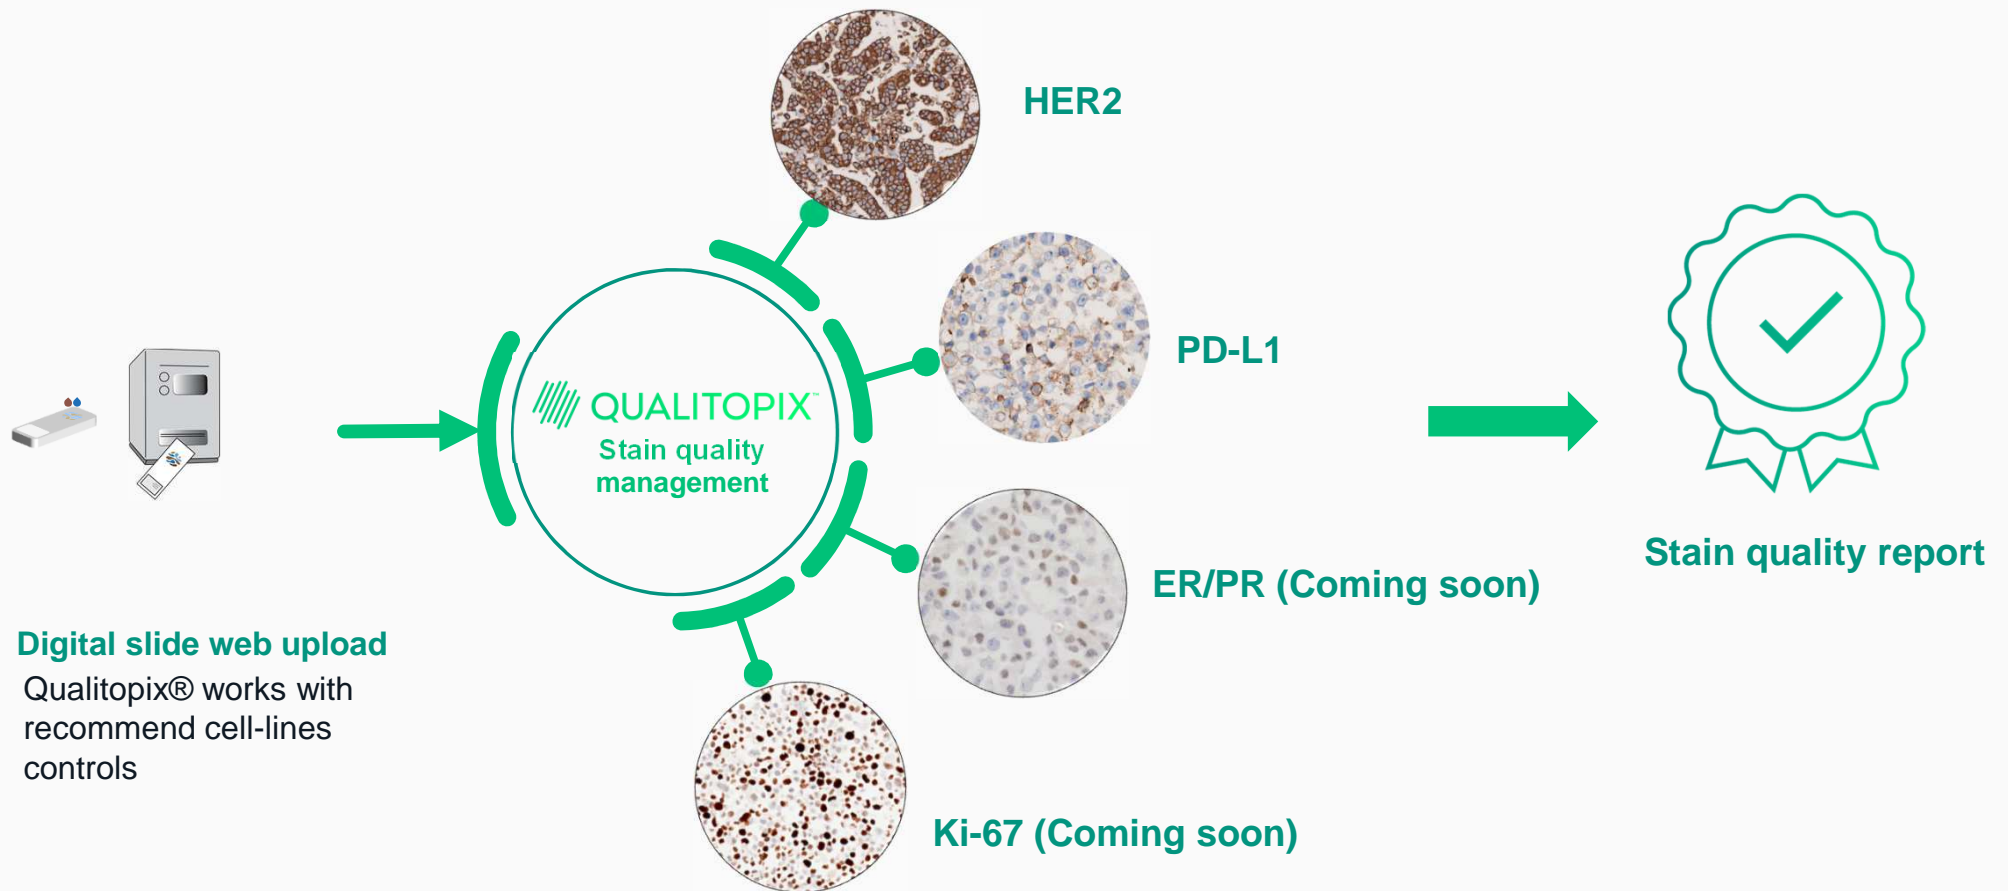

Objective and robust testing of your stain consistency

Objectively and reproducibly measure your stain consistency by using advanced AI deep learning technology and reference material.

Qualitopix has been tested for more than a year across many diagnostic pathology lab with major staining instruments and important clinical assays.

Cloud-based stain quality management solution that combines powerful AI technology with reference material

End-user feedback has been an essential part of the Qualitopix development

“ Thanks to Qualitopix, we can check to quality of these important stainings continuously and can be fully confident that our assessments are correct”

Tri Q. Nguyen, MD PhD, Pathologist at UMC Utrecht, The Netherlands

“ Thanks to the feedback we got, we were able to stabilize important markers like HER2 and PD-L1, and could solve some issues with our stainers”

Sven van Kempen, Histotech at UMC Utrecht, The Netherlands

“ The upload is easy and the graphic visualization of staining variation in our lab has aided us in identifying problem areas.”

Kristina Lystlund Lauridsen, Research Bioanalyst and Project Coordinator at Aarhus University Hospital, Denmark
